WHO WE ARE

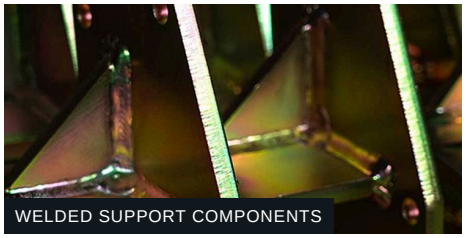

We manufacture the systems that keep operations moving.

DSM Industries is a U.S.-based industrial manufacturer of fabricated systems, structural assemblies, enclosures and machined components — built in Colorado for custom projects and repeat production, shipping to clients worldwide.

- Cutting, forming, welding, machining, finishing and assembly under one plan
- Custom builds, repeat batches or dedicated production-cell capacity
- Drawing review through delivery, with an affiliated crane and heavy-haul fleet

SUPPLIER SNAPSHOT

COMPANY	**DSM Industries**
FACILITIES	**Olathe + Delta, Colorado (USA)**
EXPERIENCE	**90+ years in manufacturing**
MATERIALS	**Carbon steel, stainless, aluminum**
WELDING	**AWS D1.1 / D1.2 certified welders · MIG + TIG**
FINISHING	**In-house powder coat, blast, prime, wet paint**
PROGRAMS	**Prototype → 100,000 units/yr**
QUOTES	**(970) 874-7518 dsmmanufacturing.com**

WELDED SUPPORT COMPONENTS

LARGE-DIAMETER FABRICATION

WESTERN SLOPE FACILITY

MANUFACTURING CAPABILITIES

One connected path from drawing to delivery.

Fabrication and finishing are planned together around the completed assembly — so material, fit, finish and quantity drive one manufacturing plan instead of a chain of handoffs.

1 Design

CAD intake, SolidWorks support, design-for-manufacturing review, drawing coordination and prototyping.

2 Form

CNC fiber laser, CNC plasma, shearing, bending and plate rolling — cylinders, cones, transitions and heavy parts up to 500 tons.

3 Weld

Qualified MIG and TIG on steel, stainless and aluminum; structural assemblies; robotic cells and logged resistance welding for repeat work.

4 Machine

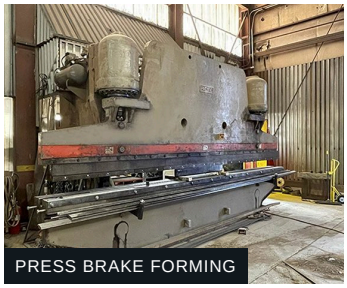

CNC mills, Mazak CNC lathe with bar feed and manual lathes for precision components, repairs and parts integrated into weldments.

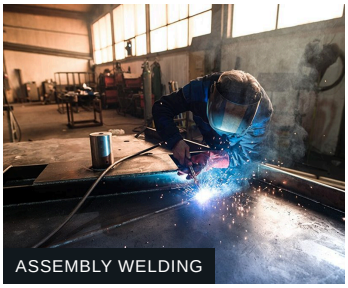

5 Finish

Industrial powder coating, sandblasting, priming, wet paint and custom colors; plating and anodizing coordinated; IP65 leak testing.

6 Deliver

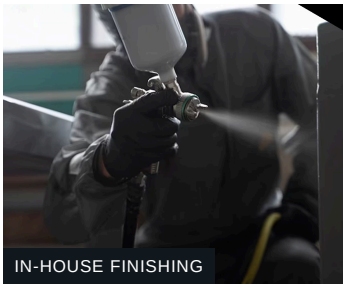

Loading, company trailers and an affiliated crane and heavy-haul fleet for hauling, lifting, rigging and installation support.

MAZAK CNC MACHINING

IN-HOUSE FINISHING

WHAT WE MANUFACTURE

Structural steel + assemblies

Equipment bases, platforms, racks, skids, substation support steel and heavy-duty assemblies built around load, fit, access and installation.

Enclosures + equipment systems

Housings, guards, panels, brackets and finished assemblies built for the application.

Machined + formed components

CNC machining, laser cutting, bending, rolling and forming connected to production output.

PRODUCTION MODELS

Custom builds and prototypes · **repeatable** small and large runs · **dedicated cell capacity** structured around a client program's cadence.

100s	1,000s	10,000s	100,000s

Annual units across programs. Volume depends on geometry, material, process mix, quality requirements and release cadence.

INDUSTRIES SERVED

Data centers
Pipe + conduit supports, loose steel, unistrut, rack framing, skids, platforms

Power infrastructure
Substation steel, equipment supports, tagged + sequenced delivery

Energy + utilities
Enclosures, supports and structures for essential operations

Industrial equipment
Heavy-duty fabricated and machined components

Tanks + vessels
Rolled shells, cones, transitions, tank supports

Public infrastructure
Field-ready structures and access systems

OEM programs
Repeatable parts and assemblies across releases and sites

Construction + architectural
Railings, cladding, brackets, site-ready structural work

EQUIPMENT + CAPACITY

What the shop floor can handle.

PROCESS	EQUIPMENT	CAPACITY
Cutting	CNC fiber laser · CNC plasma · plate shear	**5 × 10 ft laser bed; steel + aluminum to 1 in · 12 ft shear**
Forming	Press brake · plate rolling	**500-ton press brake, 20 ft bed**
Welding	MIG + TIG · robotic welding cells · resistance welding	**Carbon steel, stainless, aluminum · AWS D1.1 / D1.2 · every resistance cycle logged**
Fixturing + QC	In-house fixtures and Go/No-Go gauges	**Built for repeatable production fit**
Machining	CNC vertical mill · Mazak CNC lathe with bar feed · manual lathes	**Precision components, repairs, custom runs**
Finishing	Blast · prime · wet paint · powder coat · galvanic isolation	**22 ft deep powder-coat oven, ≈ 8 × 8 ft opening**
Testing	Leak testing for enclosure programs	**IP65 where required**
Lifting + assembly	Overhead gantry cranes	**5–20 ton · built-up assemblies to 40 ft**
Delivery	Company trailers · affiliated crane + heavy-haul fleet	**Hauling, lifting, rigging, installation support**

Equipment ratings are maximums; actual fit depends on material, thickness and geometry. Each project receives a review of material, tolerance, finish, testing, volume and timing before the production path is confirmed.

IN-HOUSE

Cutting, forming, welding, machining, powder coating, assembly and loading.

COORDINATED PARTNERS

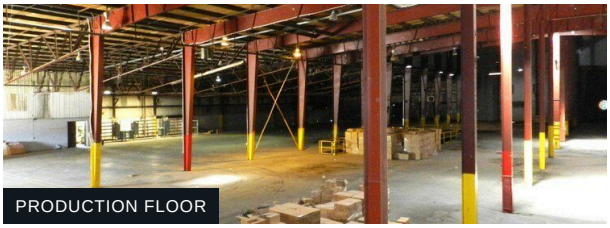

Plating, anodizing, hauling, lifting, installation and selected oversized material services.

FACILITIES

Two Colorado facilities. 106,000+ sq ft.

DSM FACILITY · WESTERN SLOPE, COLORADO

PRODUCTION FLOOR

FACILITY APPROACH

Olathe, Colorado

Manufacturing operations on Colorado's Western Slope, part of DSM's connected two-site platform.

Delta, Colorado

Primary shop: 685 Hwy 92, Delta, CO 81416.

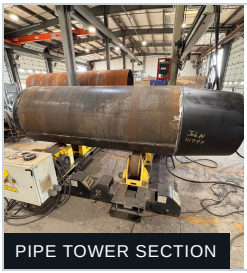

Built in Colorado. Shipped worldwide.

Packaging, transport and delivery responsibilities are defined during quoting.

PROOF IN THE WORK

Different applications. The same production discipline.

Client names withheld; references available on request.

PIPE TOWER SECTION

MOUNTAIN RESORT PROGRAM

Avalanche-control towers and cannons

Large-diameter pipe tower sections, flanged splices, welded ladder rungs and cannon bodies — welded, coated and delivered to the mountain.

U.S. RESIDENTIAL ENERGY-STORAGE OEM

Battery containment assembly

100,000 UNITS / YEAR

8,500 UNITS / MONTH

Built and validated in-house: forming jig, weld fixture, APQP, third-party tensile, salt-spray and dielectric testing.

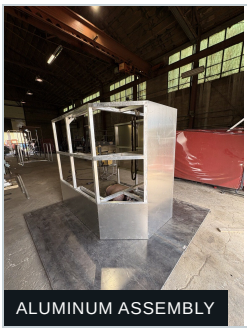

INSTALLED TOWER

STRUCTURAL

Structural tower systems

Heavy-duty tower assemblies where fabrication, delivery and installation realities all shape the work.

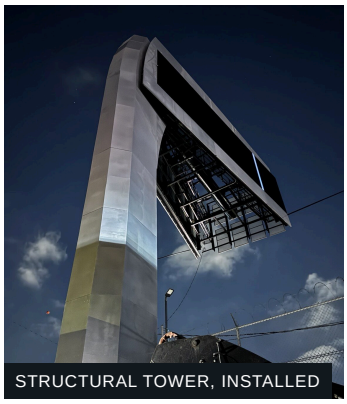

ALUMINUM ASSEMBLY

PRODUCTION PROGRAM

Repeatable sealed enclosures

Consistent fabrication, finishing, inspection and ongoing delivery cadence — from production package through repeatable output.

Also built: formed architectural angle and cladding components · custom structural glass-wall brackets.

STRUCTURAL TOWER, INSTALLED

LARGE ASSEMBLY WELDING

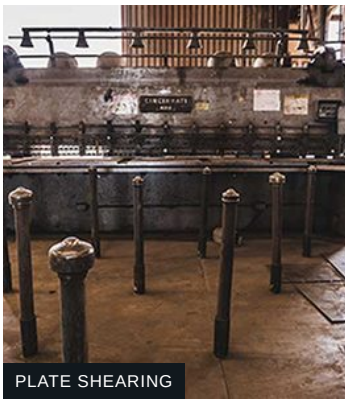

PLATE SHEARING

COMPONENT MACHINING

REQUEST A QUOTE

Send the package. We'll review the manufacturing path.

1. Drawings (current revision) or available project information
2. Material, quantities and expected ongoing demand
3. Required timing and project location
4. Critical dimensions, finish, inspection and testing requirements
5. Packaging, transport and delivery responsibilities
